

Brief instructions for installation of PhoX

System requirements

Operating system: Windows XP, 7, 8, 10

Min. 4GB RAM

Ethernet network adapter

Installation

1. Copy and unpack the archive PhoX.zip into any target directory

After copying, the following files are stored in the target directory:

PhoX.exe	executable program
PhoX.plf	license file
PhoXmanual.pdf	instruction manual and online help (in German only)
PhoxQuickHelp.rtf	quickhelp file with short context-sensitive instructions (can be edited)
PhoXassistant.txt	script file with example procedures of typical processing tasks (can be edited)
PhoXexercise.txt	script file with example exercise (can be edited)
PhoxInstall.exe	copy program for PhoX files

2. Execution of PhoXInstall.exe

The program copies the above listed files into an arbitrary target directory, e.g. that students can execute PhoX on a local directory that is not write-protected. Optionally administrator rights must be given to start PhoxInstall.

3. Example data

The archives PhoXDemos_xxx.zip contain exercises and demo data to be used by PhoX. The archives can be unpacked into arbitrary directories.

Versions

1. Full version

Complete functionality, protected by dongle

2. Academic version

Single user license. Complete functionality, protected by local MAC address, requires a special license file. Only one MAC address will be accepted for a single user. Check your valid MAC address with the provided program GetMAC.zip. For academic and non-commercial purposes only. Licenses are given after verification of the user's institution and field work.

3. Student version

Multi user license. Limited functionality, requires a special license file and a central file server that can be accessed by all students. For academic and non-commercial purposes only. Students should not ask for licenses themselves, it should be done by their teacher/professor/lecturer.

4. Trial version

not yet available

Language versions

Currently PhoX is available in the following languages:

- German
- English

Other language versions are available on demand.

Registration

For the student version of PhoX, users have to register with name and university registration code. Registration data is stored locally and will be reloaded automatically when PhoX will be executed again. Students can open only existing project files that they have created by themselves.
